### STOPPED HER BABY'S COUGH

No remedy is better known than Foley's Honey and Tar for giving quick relief from coughs, colds and croup. Mrs. W. M. Stevens, Vivian, W. Va., writes: "When my baby was 11 months old he had a terrible cough, and nothing did him any good. I read about Foley's Honey and Tar, and the first dose helped him and in two days the cough was stopped. I can say Foley's Honey and Tar saved my baby's life after everything else had failed." Contains no opiates. Sold everywhere.

### NOTICE TO OUR FRIENDS AND CUSTOMERS

No more credit. As our business is small and we have no time for collecting we will do no more credit work. Please do not ask us for it any more.

Yours very truly,

E. N. Daniel & Son,

R. A. Wylie,

dw

Shoe Repairers.

### A REAL BARGAIN

40-acres, ONE HALF of which is ALFALFA land, located 2 miles from town on public road, all under good wire fence and cross fenced with same kind of material; all open; 30 acres in cultivation, balance pasture and meadow; comfortable 4-room house; deep well, fine water, with galvanized casing, fair outbuildings. For a short time can be had for \$2,000.00.

Moore and Martin.

### SHOWS HOW THE LOAN GOES

The progress, step by step, of a shell aimed at the Kaiser's head keeps people in the nation's capital informed of the effectiveness of the Fourth Liberty Loan campaign. A sign, almost as tall as the building, has been erected on the south front of the treasury.

## UNCLE SAM'S ADVICE ON FLU

(Continued from Page One.)

gested," as the doctors say. There may be running from the nose, or there may be some cough. These signs of a cold may not be marked; nevertheless the patient looks and feels very sick.

"In addition to the appearance and the symptoms as already described examination of the patient's blood may aid the physician in recognizing 'Spanish influenza,' for it has been found that in this disease the number of white corpuscles shows little or no increase above the normal. It is possible that the laboratory investigations now being made through the National Research Council and the United States Hygienic Laboratory will furnish a more certain way in which individual cases of this disease can be recognized."

What is the course of the disease? Do people die of it?

"Ordinarily, the fever lasts from three to four days and the patient recovers. But while the proportion of deaths in the present epidemic has generally been low, in some places the outbreak has been severe and deaths have been numerous. When death occurs it is usually the result of a complication."

What causes the disease and how is it spread?

"Bacteriologists who have studied influenza epidemics in the past have found in many of the cases a very small rod-shaped germ called, after its discoverer, Pfeiffer's bacillus. In other cases of apparently the same kind of disease there were found pneumococci, the germs of lobar pneumonia. Still others have been caused by streptococci, and by others germs with long names."

"No matter what particular kind of germ causes the epidemic, it is now believed that influenza is always spread from person to person, the germs being carried with the air along with the very small droplets of mucus, expelled by coughing or sneezing, forceful talking, and the like by one who already has the germs of the disease. They may also be carried about in the air in the form of dust coming from dried mucus, from coughing and sneezing, or from careless people who spit on the floor and on the sidewalk. As in most other catching diseases, a person who has only a mild attack of the disease himself may give a very severe attack to others."

What should be done by those who catch the disease?

"It is very important that every person who becomes sick with influenza should go home at once and go to bed. This will help keep away dangerous complications and will, at the same time, keep the patient from scattering the disease far and wide. It is highly desirable that no one be allowed to sleep in the same room with the patient. In fact, no one but the nurse should be allowed in the room."

"If there is cough and sputum or running of the eyes and nose, care should be taken that all such discharges are collected on bits of gauze or rag or paper napkins and burned."

## Special Values in Ladies Waists

If the patient complains of fever and headache, he should be given water to drink, a cold compress to the forehead and a light sponge. Only such medicine should be given as is prescribed by the doctor. It is foolish to ask the druggist to prescribe and may be dangerous to take the so-called 'safe, sure and harmless' remedies advertised by patent medicine manufacturers.

"If the patient is so situated that he can be attended only by some one who must also look after others in the family, it is advisable that such attendant wear a wrapper, apron or gown over the ordinary house clothes while in the sick room and slip this off when leaving to look after the others."

"Nurses and attendants will do well to guard against breathing in dangerous disease germs by wearing a simple fold of gauze or mask while near the patient."

Will a person who has had influenza before catch the disease again?

"It is well known that an attack of measles or scarlet fever or smallpox usually protects a person against another attack of the same disease. This appears not to be true of 'Spanish influenza.' According to newspaper reports the King of Spain suffered an attack of influenza during the epidemic thirty years ago, and was again stricken during the recent outbreak in Spain."

How can one guard against influenza?

"In guarding against disease of all kinds, it is important that the body be kept strong and able to fight off disease germs. This can be done by having a proper proportion of work, play and rest, by keeping the body well clothed and by eating sufficient wholesome and properly selected food. In connection with diet, it is well to remember that milk is one of the best all-around foods obtainable for adults

as well as children. So far as a disease like influenza is concerned, health authorities everywhere recognize the very close relation between its spread and overcrowded homes. While it is not always possible, especially in times like the present, to avoid such overcrowding, people should consider the health danger and make every effort to reduce the home overcrowding to a minimum. The value of fresh air through open windows cannot be over emphasized."

"When crowding is unavoidable, as in street cars, care should be taken to keep the face so turned as not to inhale directly the air breathed out by another person."

"It is especially important to be aware of the person who coughs or sneezes without covering his mouth and nose. It also follows that one should keep out of crowds and stuffy places as much as possible, keep homes, offices and workshops well aired, spend some time out of doors each day, walk to work if at all practicable—in short, make every possible effort to breathe as much pure air as possible."

"In all health matters follow the advice of your doctor and obey the regulations of your local and state health officers."

"Cover up each cough and sneeze, if you don't you'll spread disease."

### CHURCH HAS LOAN LEGION

Pastor and Entire People "Lined Up for Bond Buying and Boosting."

Rev. Arthur Hale Keeney and 600 other people of Jeffersonville, Ind., city of 12,000 souls, are formed into a battalion for the Fourth Liberty Loan army. They are not the only ones in Jeffersonville who are loyal to the government, but are an illustration of the spirit of the entire citizenship.

The 600 people of Dr. Keeney's battalion are the members of the Presbyterian Church of which he is the pastor. And they are all Liberty Loan boosters to the last one of them. They have bought bonds in the other campaigns and they mean to buy to the limit in this one. They are equally determined to buy of the Fifth and Sixth and Seventh and to the end of the government demands.
